

# DGT1S / DGT1SAN

**QUICK START GUIDE**  
for DGT1Sxx with firmware version from 08.00.00

**ENGLISH**

**Autoryzowany przedstawiciel w Polsce:**  
**Elektroniczne Wagi Przemysłowe Sp. z o.o.**  
**ul. Zacna 31, 80-283 Gdańsk**  
**+58 340 00 61 | [info@ewp.com.pl](mailto:info@ewp.com.pl)**  
**[www.ewp.com.pl](http://www.ewp.com.pl)**

## 1. Electrical scheme

## 2. Check the firmware version

1. Reboot the weight transmitter: the xx.yy number shown is the firmware version.

08.00

This guide is only for DGT1Sxx with firmware version from 08.00.

## 3. Key function in setup mode

|   |                                            |
|---|--------------------------------------------|
| ▼ | Decreases digit / Scroll down              |
| ▲ | Increases digit / Scroll up                |
| ▶ | Enter the setup<br>Selects digit to modify |
| ↵ | Enters a step / Confirms                   |
| C | Clears / Exits a step (no save)            |

## 4. Configuration menu

1. Reboot the weight transmitter

2. Press the ▶ key when display shows the 888888 message:

## 5. Maximum scale capacity and increment setting

Examples:

For a 60000kg scale, with 2kg increment:

d.i.dEC = 2

CAPAC = 60000

For a 10000 g scale, with 0,1g increment:

d.i.dEC = 0.1

CAPAC = 10000.0

For a 3000kg scale, with 0,05kg increment:

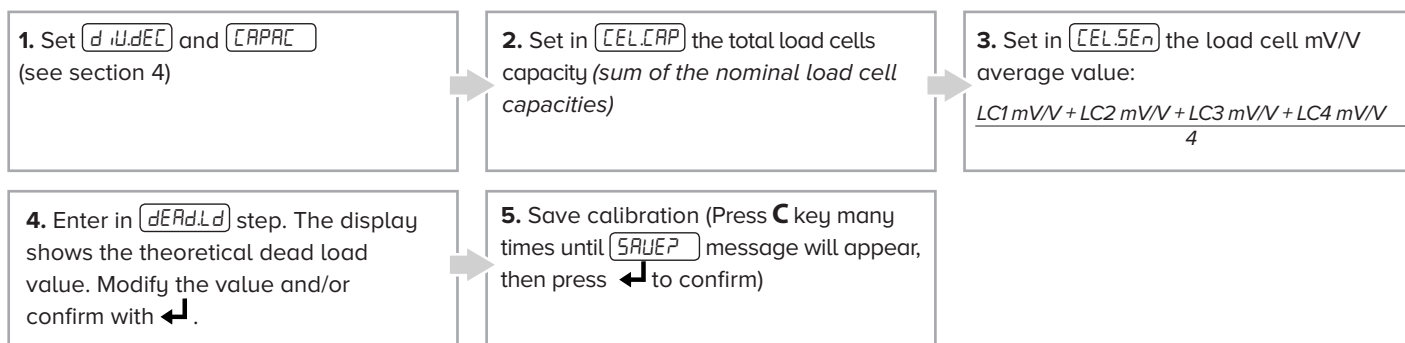

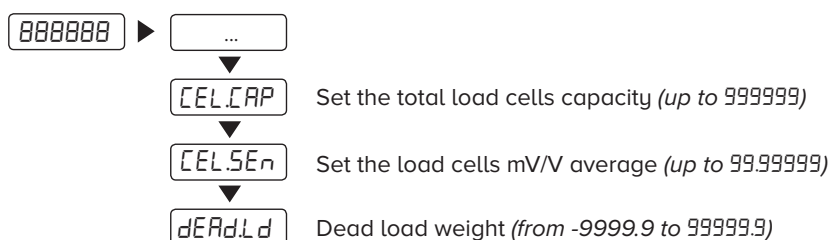

d.i.dEC = 0.05

CAPAC = 3000.00

\*<sup>1</sup> Increment = the amount that the scale will increment by as weight is added or removed.

\*<sup>2</sup> Maximum capacity = the maximum weight that can be measured using the scale you are creating.

## 6. Theoretical calibration

## 7. Zeroing of the dead load (pre-tare zeroing)

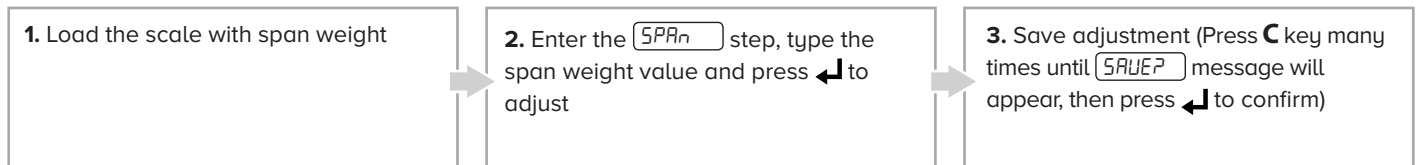

This functionality allows to zero the weigh of the scale structure (e.g.: empty silo, empty vessel, etc.) shifting the scale adjustment points.

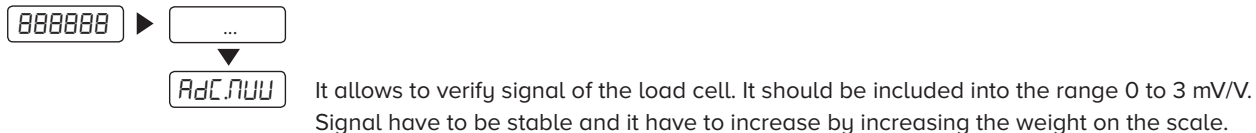

## 8. Zero adjustment

## 9. Span adjustment (with sample weight)

## 10. Diagnostic of the load cell mV/V

## 11. Analog output adjustment

### 11.1 Adjustment procedure

1. Connect a multimeter to pin 8 (+) and 9 (-) for the voltage analog output or 10 (+) and 11 (-) for the current analog output.
2. Follow the procedure:

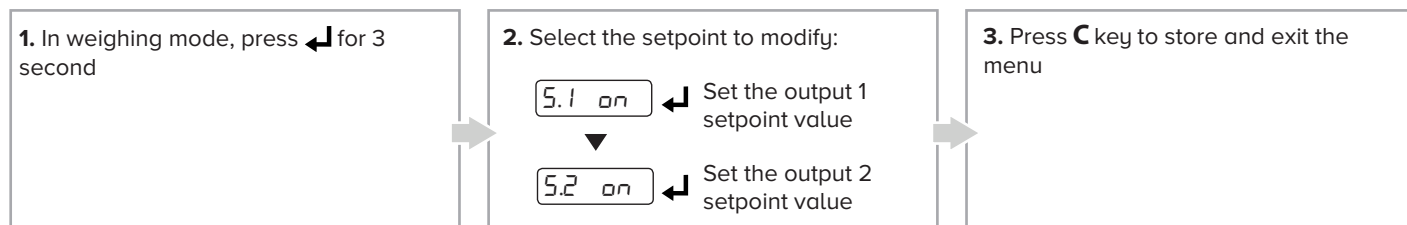

## 12. Input setting

## 13. Output setting

### 13.1 How to program setpoints

Please refer to the complete technical manual for more information

## 14. Fieldbus setting

Please refer to the fieldbus quick start guide for configuration

## 15. RS485 port setting

Take note: standard configuration protocol is Modbus RTU.

## 16. RS232 port for service configuration

RS232 port can be used for programming service only.

This port is active only in configuration menu and it is standard configured as 9600 baud, n-8-1.

Configuration can be made by using the PC utility “DiniTools”.

## 17. Programming errors

| MESSAGE        | DESCRIPTION               | SOLUTION                                                                                                                                                                                   |
|----------------|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Pr.EC.</i>  | Calibration error         | First calibrate the zero point, then proceed with the next points.                                                                                                                         |
| <i>Err.Pnt</i> | Calibration error         | Check the connection of the load cell. Check that the cell signal is stable, valid and greater than that of the previously acquired point.                                                 |
| <i>Er 11</i>   | Calibration error         | Increase the calibration weight.                                                                                                                                                           |
| <i>Er 12</i>   | Calibration error         | Check that the signal coming from the cell increases upon the increasing of the weight loaded on the scale. When acquiring the calibration points, use the increasing calibration weights. |
| <i>Er 37</i>   | Calibration error         | Repeat the calibration, checking that the capacity and division have been correctly set.                                                                                                   |
| <i>Er 39</i>   | Instrument not configured | Transmitter needs to be configured.                                                                                                                                                        |
| <i>CEr.36</i>  | Calibration error         | Check that the signal coming from the load cell is not negative.                                                                                                                           |
| <i>CEr.37</i>  | Calibration error         | Check that the signal coming from the load cell is not negative.                                                                                                                           |
| <i>Err.Not</i> | Weight unstable           | Check in <i>AdC.NUU</i> parameter that the signal is stable. If the connection of the cells is with 4 wires, check that the sense jumpers are inserted.                                    |

## 18. Modbus protocol - holding registers (read/write area)

| Data                                                          | Reg. Nr.                                                     | Byte                                                                                                                                                                                                                                                                                                                                                                                                                                  | DESCRIPTION                                                                                                                                                | EXAMPLE                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                             |                           |                    |        |                    |        |      |        |                      |                     |                     |                    |        |                    |        |        |        |        |                    |        |        |       |        |        |        |        |                    |                    |        |        |        |        |

## 18.1 Communication examples

### SCALE ZEROING COMMAND

| Query:            | Slave address | Active function | Register address | Register value   | Error check       |
|-------------------|---------------|-----------------|------------------|------------------|-------------------|
| Hexadecimal Coded | 01            | 06              | 0000             | 0001             | 480A              |
| Binary Coded      | 00000001      | 00000110        | 0000000000000000 | 0000000000000001 | 01001000000001010 |

If the command will be correctly executed, the answer will be exactly the query string.

### AUTOMATIC TARE COMMAND

| Query:            | Slave address | Active function | Register address | Register value   | Error check       |
|-------------------|---------------|-----------------|------------------|------------------|-------------------|
| Hexadecimal Coded | 01            | 06              | 0000             | 0002             | 080B              |
| Binary Coded      | 00000001      | 00000110        | 0000000000000000 | 0000000000000010 | 00001000000001011 |

If the command will be correctly executed, the answer will be exactly the query string.

### NET WEIGHT READING

| Query:            | Slave address | Active function | Address 1 <sup>st</sup> register | Number of registers | Error check       |
|-------------------|---------------|-----------------|----------------------------------|---------------------|-------------------|
| Hexadecimal Coded | 01            | 04              | 0002                             | 0002                | D00B              |
| Binary Coded      | 00000001      | 00000100        | 0000000000000010                 | 0000000000000010    | 11010000000001011 |

| Response (e.g. 500kg): | Slave address | Active function | Nr. bytes | Value 1 <sup>st</sup> register | Value 2 <sup>nd</sup> register | Error check     |
|------------------------|---------------|-----------------|-----------|--------------------------------|--------------------------------|-----------------|
| Hexadecimal Coded      | 01            | 04              | 04        | 0000                           | 01F4                           | FB93            |
| Binary Coded           | 00000001      | 00000100        | 00000100  | 0000000000000000               | 0000000111110100               | 111101110010011 |

## 19. Modbus protocol - Input registers (read area)

| Data                                 | Reg. Nr.           | Byte                                                                                                                                                                                                                                                                                                                                                                                                             | DESCRIPTION                                                                                                                                                                                                                                                                                                    | EXAMPLE                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |        |                    |        |        |        |        |                    |        |        |            |        |       |       |        |                   |        |        |                    |        |                        |        |        |   |   |                     |   |   |   |   |
